Restaurant Recommendation App

Restaurant recommendation app aims to make it easy for people to check restaurant near them and give diiferent price range where one can easily choose on their preference. It is important especially for those visiting a new location as they can compare different restaurants.Users will be able to search for restaurants, check information about restaurant, give ratings, view ratings, make recommendations and view recommendations.

Problem Solution

Restaurant recommendation app will be of help to tourists as they will be able to compare different restaurants in areas they are visiting. They will also be able to check different types of food being offered with there prices. This will be able to improve experience of tourist who are new to the country or even domestic tourists vising new places.

Inscope

The application will be able to do the following:
- Register new users
- Registerred users will be able to log in to the app
- Users will be able to view and give recommendations
- Users will be able to view and give ratings of a restaurant
- Users will be able to change their profile

Risk

- Security and confidentiality has been so much publicized and this can make users hesitant to adopt new application.
- Cost of implementation and marketing the app can be so high.
